

Welcome!

Science is a method, a way of thinking and solving problems. It is driven by the human desire to understand—by curiosity. We are all born with curiosity and we all wonder why things happen; we practice the scientific method everyday: when we troubleshoot our computer, experiment with pick-up lines in a bar, or determine what to order at a restaurant. Science is just the best way humans have established to answer questions that interest us.

Art is a direct link to human emotion. It is a way of communicating. Emotion drives an artist to create, and the art in return creates emotions in the artist. If it is done well these emotions are translated through the art to the consumers. Art is used every day to entertain, communicate, and persuade. Graphic design, film, theatre, music, architecture, and painting are all great examples of art in society, but it hardly ends there. Art is everywhere; without it we can't sculpt letters into words, words into sentences, paints into images, or sounds into music—without it we can't communicate.

Who We Are

About Us

The Zenk Museum of Art and Science is dedicated to exploring the overlaps between art and science, highlighting those who excel in the fields, and teaching future and current generations the importance of both art and science in culture, problem solving, and the development of a better tomorrow. The Zenk Museum is not an art museum; it is not a science museum; it's a unique experience highlighting how art and science can, and have, worked together to form society.

ZENK MUSEUM OF ART AND SCIENCE

ZENK MUSEUM OF ART AND SCIENCE

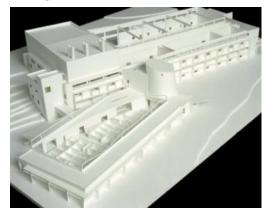

Exploring the overlaps between the arts and science...

Exhibits

The Overlaps: Architecture

The Overlaps is an exhibit exploring some of the unique areas which demonstrate a perfect marriage of art and science. Every three months this exhibit is completely re-designed, highlighting a new and unique topic. Summer 2015 will highlight architecture, its history, artistic values, engineering, and the process of designing, engineering, and building some of man's most iconic work.

The Science of Art and Science

Ever wondered what makes somebody scientific and what makes somebody artistic? Ever wondered if you are "right" or "left" brained (Hint: you're actually both). This exhibit is aimed at answering these exact questions. Using psychology, the scientific method, and recent studies, this exhibit breaks down the personalities of some of the world's most famous people. A series of interactive tasks and games based on these peoples unique skills, allows you to challenge your friends, and perhaps ultimately predict your personality.

The Art of Technology

The Art of Technology showcases some of the most up-and-coming technologies on the market, and even some that are yet to be. Additionally, the exhibit showcases some of the former technologies that have lead up to those making noise today.

Garage Gadgets

Garage Gadgets is an art gallery for makers. Featuring gadgets, gizmos, sculptures, paintings, computer programs, and more—all have one thing in common, they were homemade by normal people.

Note: This visitor's guide is meant to give an overview of Zenk Museum's exhibits. Exhibit tour information can be found in the Exhibit Brochures at the entrance to each exhibit.

Please Do Touch!

At Zenk Museum, we believe that the best way to learn is through doing. Our exhibits are hands on, and we strongly encourage visitors to interact with, touch and tinker with exhibition pieces. Unless otherwise posted, feel free to interact with all equipment, models, and displays!
